

Delta MiniDot HD 26 (6 MOA dot)

The Delta Optical MiniDot HD 26 is an ultralight reflex sight designed for IPSC shooting, offering an upgraded and reinforced version of the MiniDot. Despite its compact size, it withstands shocks up to 6500 J, ensuring precision and durability for intensive use. Its low-profile design maintains visibility and suits both hunting rifles and pistols for dynamic shooting.

Featuring manual brightness adjustment, a 6 MOA aiming point, auto-off in low light, and a dot brightness memory function, it provides versatility and ease of use. It includes a CR2032 battery, an adjustment tool, and a protective cap, with optional mounts available for various pistols.

Specifications
